

Dear SQP customer,

We are pleased to announce SQP will be participating in the EU Sustainable canola program this season. This has been developed to guarantee the access of Australian Non GM canola into key European markets . whilst this is only a relatively small market in 2012, we believe it's important to be involved at an early stage. The EU Sustainable canola program is expected to grow in coming years in line with incoming European legislation, and certification will be important to ensure access to this key market.

Due to the limited size of the current EU Sustainable canola market, SQP are limiting our current program to the following sites:

- ABA Nullawil
- ABA Donald
- ABA Elmore
- ABA Tatyoon North
- Lake Bolac Grain Storage (Pending audit approval)
- Graincorp Geelong Terminal

This year our premium for Sustainable Canola will be \$2/mt, and it will apply to any new and existing contracts into the above sites. To access this premium you must sign the enclosed declaration and return to the SQP office. The premium will be paid retrospectively, following the completion of harvest, once all harvest contracts have been filled.

Please find enclosed a copy of the certification for completion, along with further information of the program.

Please contact your nearest SQP office with any questions.

Regards,

Ben Fleay
